Data Sources, Reference, & Notes: Data were collected via daily searches of publicly available online content (Google Alerts, Google, and Google News). A standard set of search terms were used to identify COVID-19-related public school closures lasting ≥1 day. Official state-level health and education department websites, and school and district-level websites were also searched. The map shows the final known state-level closure status for the previous academic year (2019-2020) for public K-12 school districts in which schools were physically closed to students for traditional on-site learning. School districts may have used distance learning to continue education from home. Orders and recommendations for statewide closure originated from state governors and/or state education departments. Because data are limited to information derived from publicly available closure announcements, some closures may have been missed depending on how they were reported and some information may not be complete or entirely accurate. Data were only collected for the 50 states and DC, are restricted to public K-12 school districts, and do not include private schools. Number of districts per state was estimated per data available from the National Center for Education Statistics Common Core of Data (<https://nces.ed.gov/ccd/districtsearch/>). Districts reporting 0 students were excluded.
